

COMPANY PROFILE

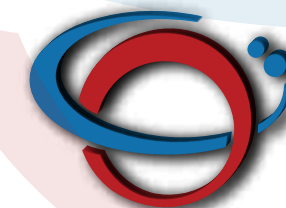

Kingdom of Saudi Arabia – Madinah
Prince Abdul Mohsen Bin Abdul Aziz Street - Qurban 2763
www.tawasol.com.sa

Firstly, we appreciate your interest, and we hope to gain your trust and aim to be the optimal choice for your investments in the field of Information and Communication Technology (ICT) and network infrastructure systems and their components.

ALTAWASOL ALMUNER Establishment for Trading is an ambitious Saudi establishment that has dedicated all its capabilities and extensive technical expertise, spanning over ٢٠ years, to the optimal investment of financial resources. The company aims to provide the best solutions and technical systems tailored to the scale of each project to achieve its desired goals with the highest technical standards and the most cost-effective approach. This is all while maintaining quality, assurance, and reliability.

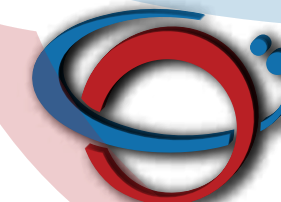

We offer our services through the **Deeptech Division**, founded by a group of engineers, passionate about their work and ambitious about their ideas. It serves as the pulsating technical heart and the driving force for development and progress. Our objective is to provide comprehensive, innovative, and intelligent technical services and solutions to achieve sustainable development in the fields of communications and information technology within the framework of the Kingdom's Vision ٢٠٣٠. We strive to meet project requirements by delivering services characterized by high quality and carefully considered prices, in accordance with the highest technical standards.

Vision

Our vision is embodied in our ethical and professional commitment to provide the foundational infrastructure for information technology and communications equipped with the latest software and systems for all clients across the Kingdom of Saudi Arabia. This is achieved through a specialized and expert national human workforce to accomplish their goals, earn their trust, preserve their material and technical assets, and develop them while maintaining quality, assurance, and reliability.

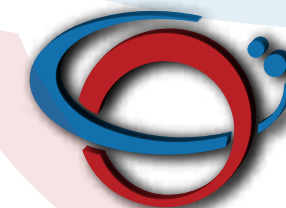

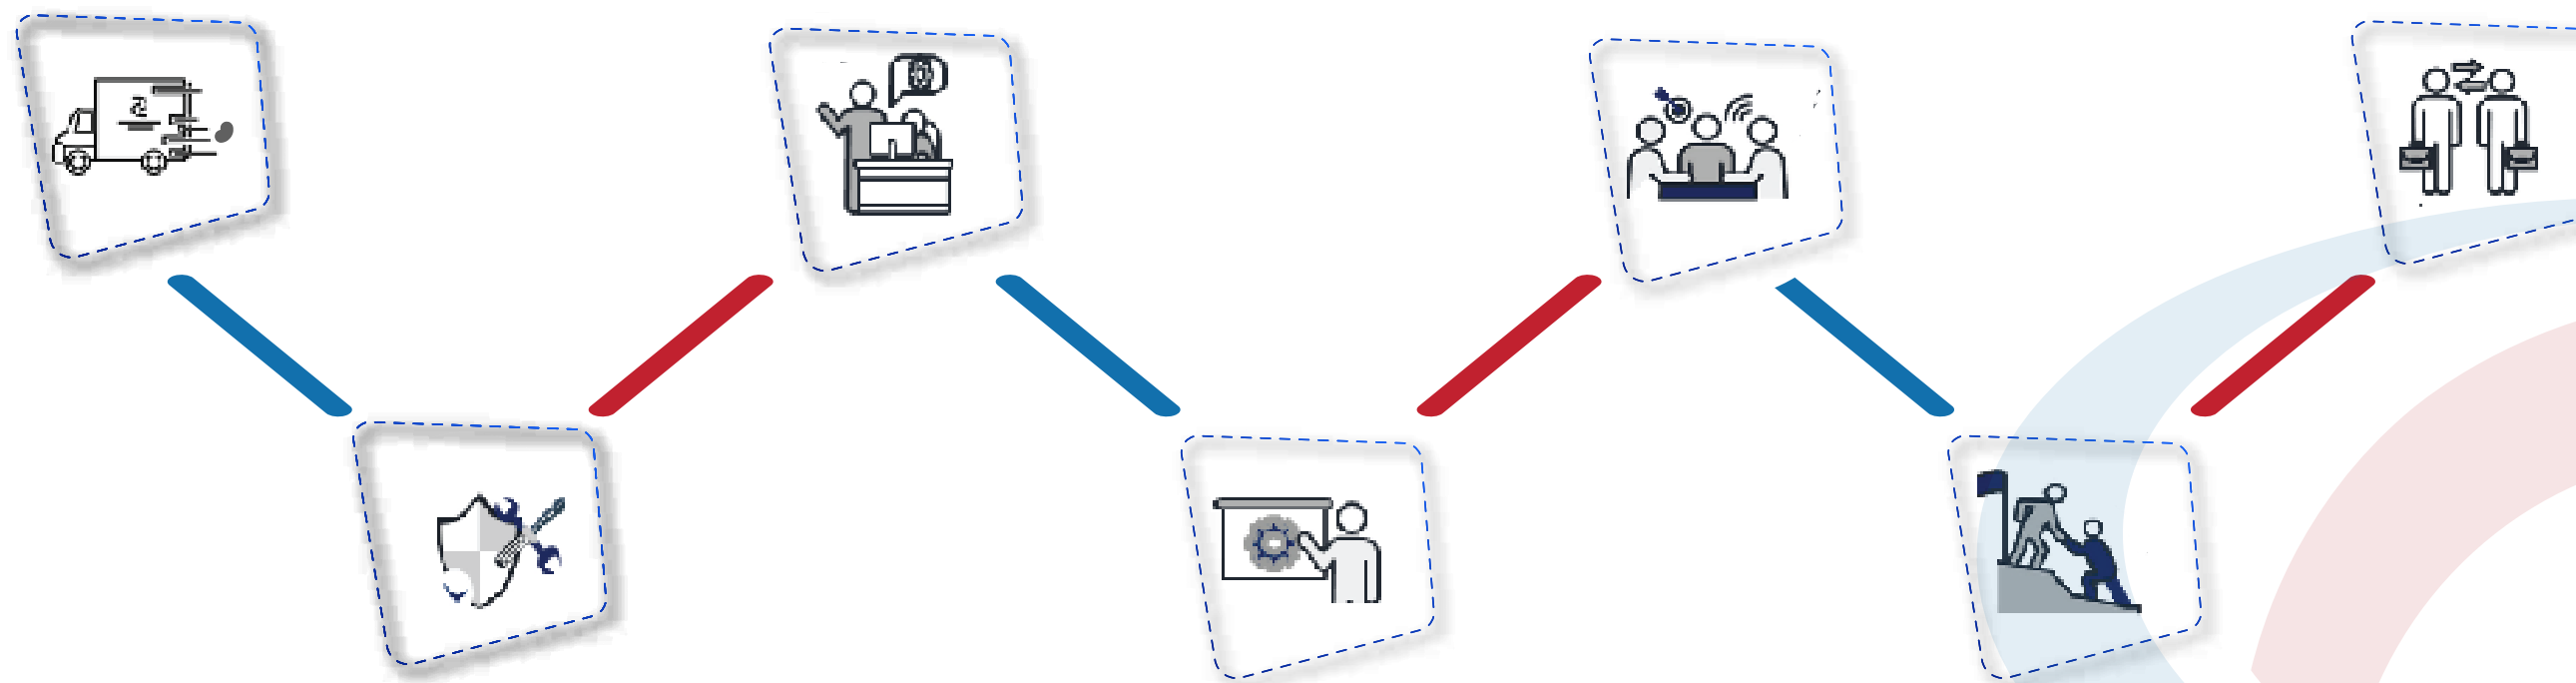

Mission

We continually strive for the best and aim to disseminate the understanding of technology and its systems from a technical perspective different from the material perspective.

Our goal is not solely to achieve financial profit; we aspire to be your preferred consultancy and investment destination, specializing in managing technical resources and assets, selecting the best at the most appropriate prices, all while preserving quality, assurance, and reliability.

We offer our services flexibly and efficiently according to the stage and size of each project. Not all projects are alike; we believe that each project has its own technical personality, requirements, and systems different from others concerning project stage, size, sector, and goals.

Studies and Technical Consultations

An integrated team of engineers and technicians to provide the necessary study and technical advice for the initiation of any technical project, starting from establishing the main network structure to selecting the necessary systems that align with the size and sector of each project to provide maximum benefits at the least cost without compromising quality.

After-Sales Services

A strong focus on after-sales services, including providing the necessary warranties for works and systems, offering essential technical support, on-site training, supplying necessary maintenance and spare parts, and the advantage of a rapid response to cover any emergency technical faults.

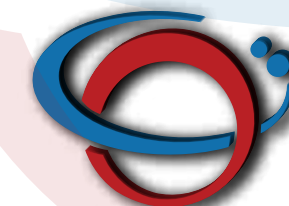

Sales and Supply

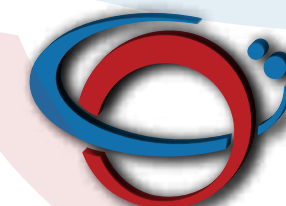

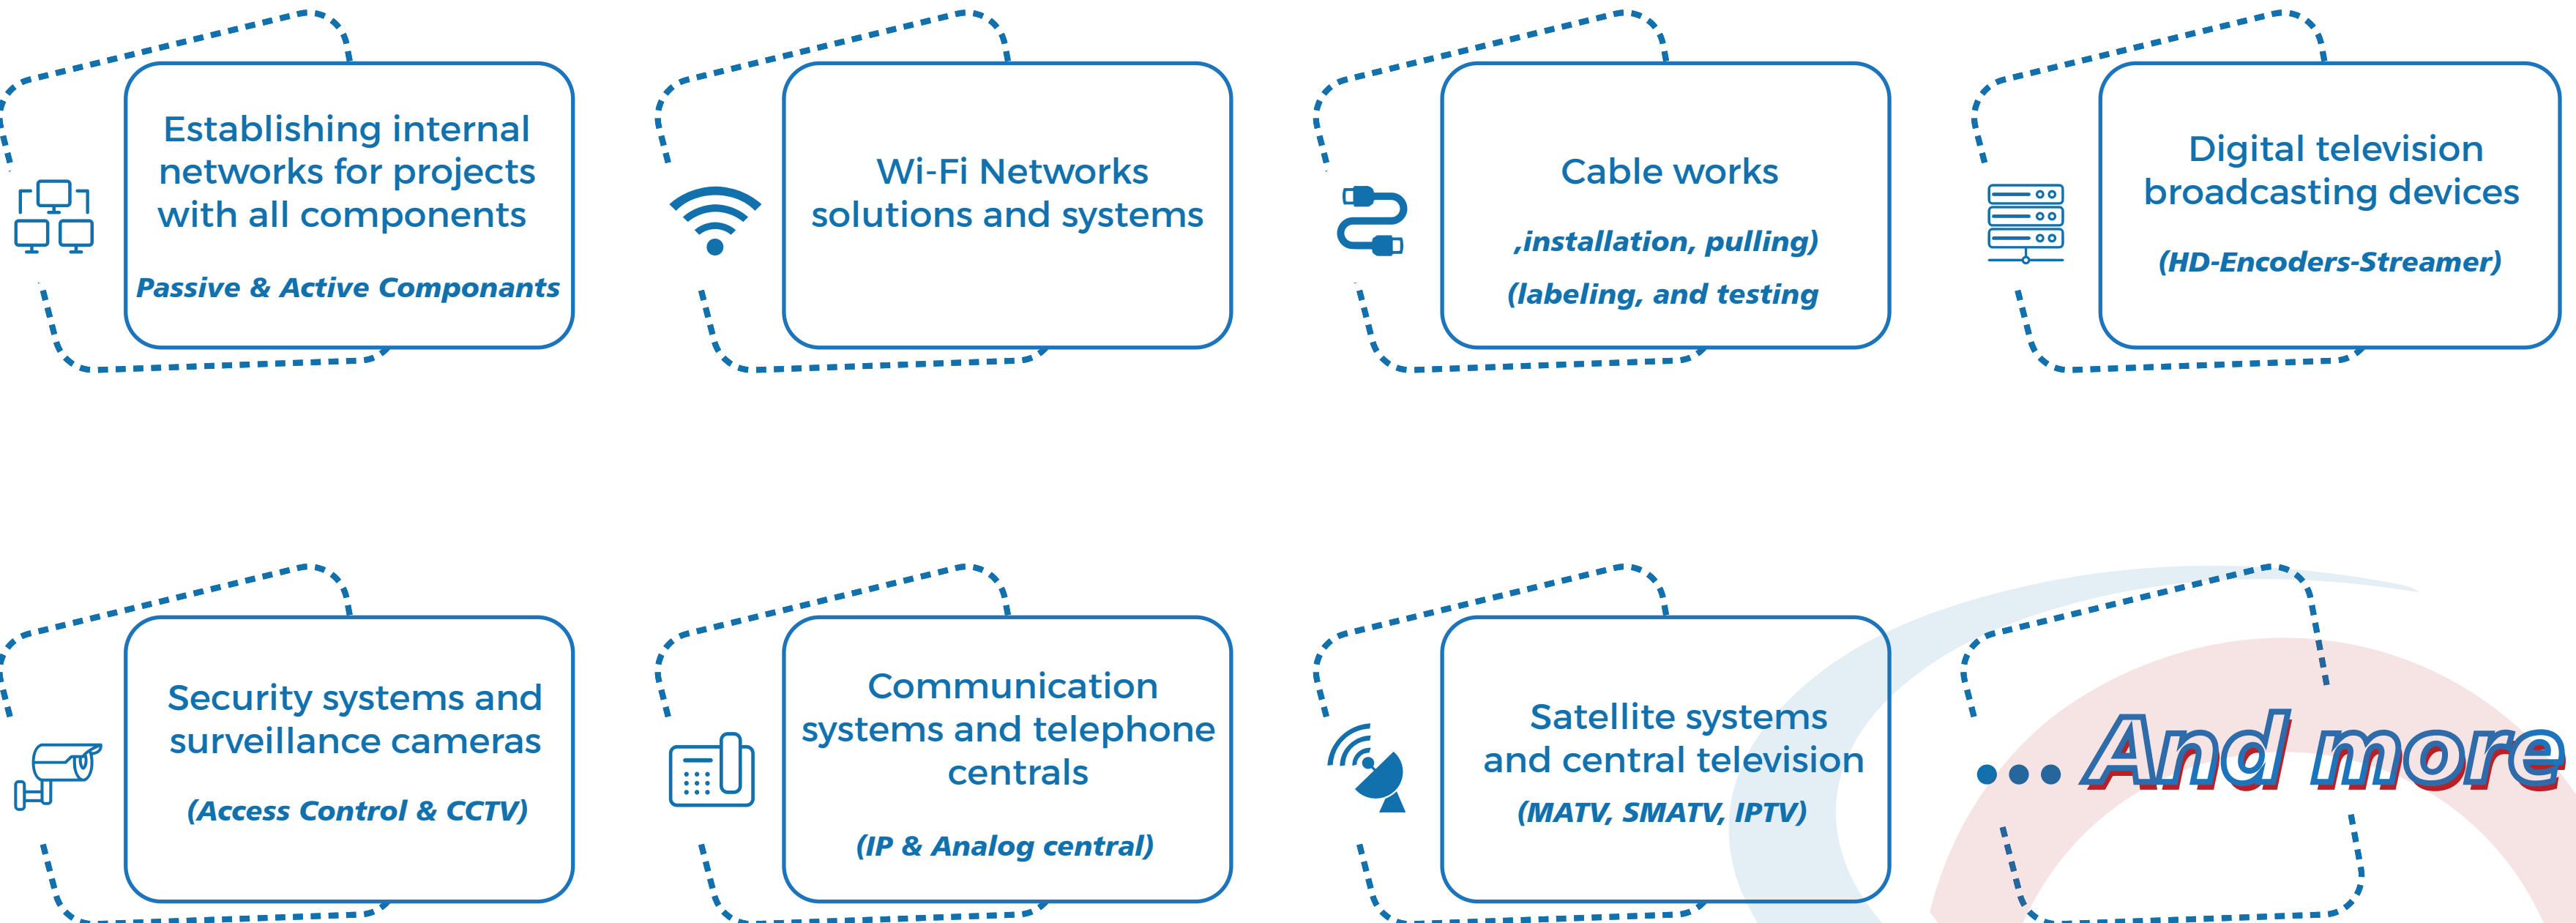

Leveraging our extensive experience in products and systems, we optimally invest in our distinguished business relationships with local and international suppliers to offer the best prices within the technical framework and project-approved specifications. We fully commit to the project timeline for delivery without compromising quality.

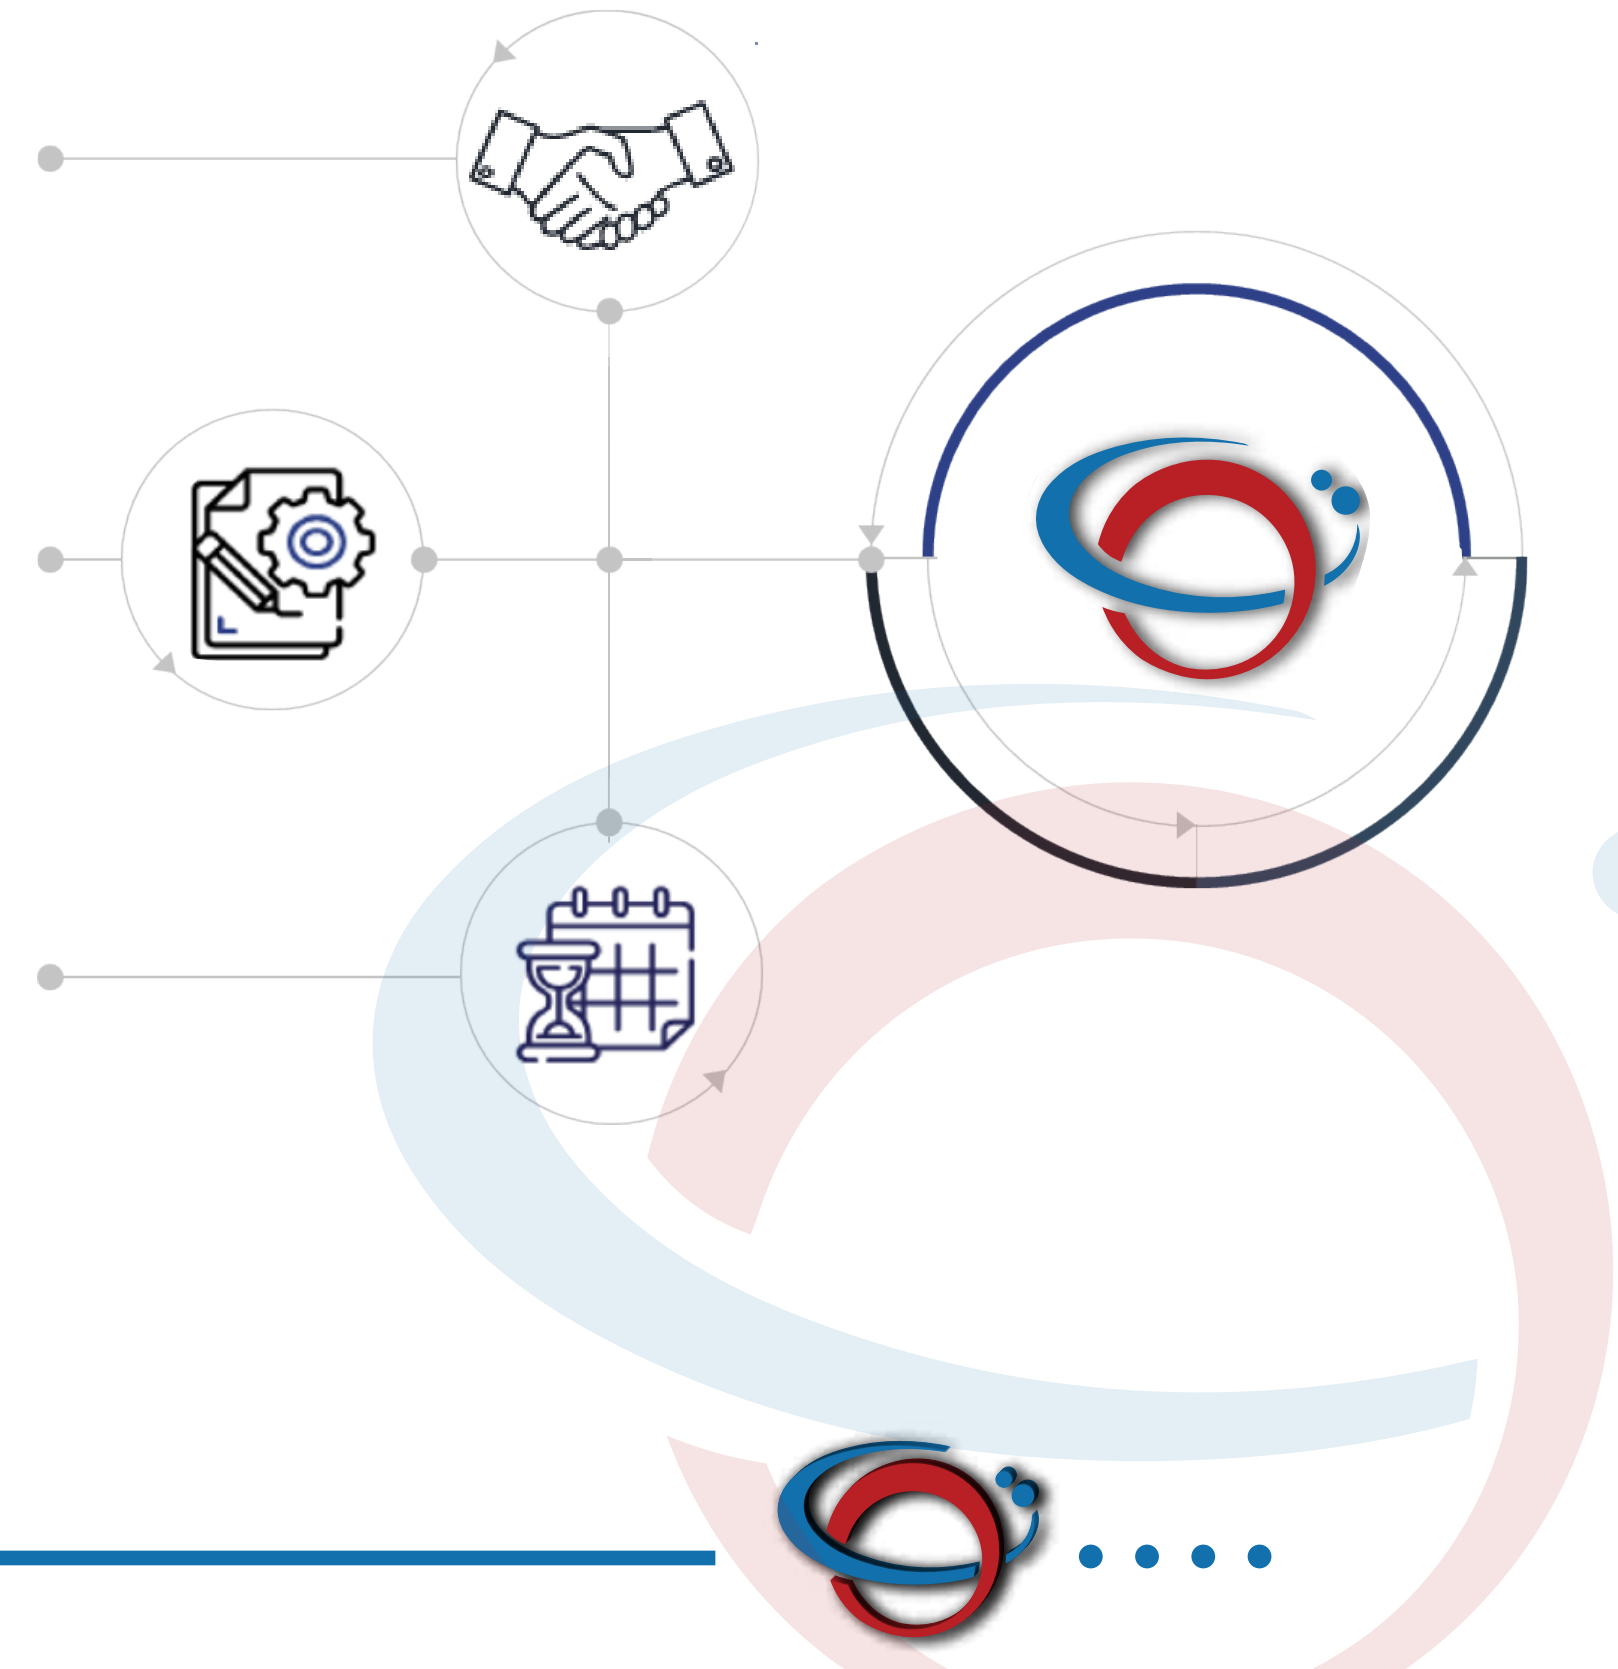

Maintenance and Operation

Applying all our technical expertise to provide assistance to existing projects through maintenance and operation contracts, offering technical support, supplying spare parts, and developing and updating systems, directing them towards optimal performance and service at the lowest possible costs.

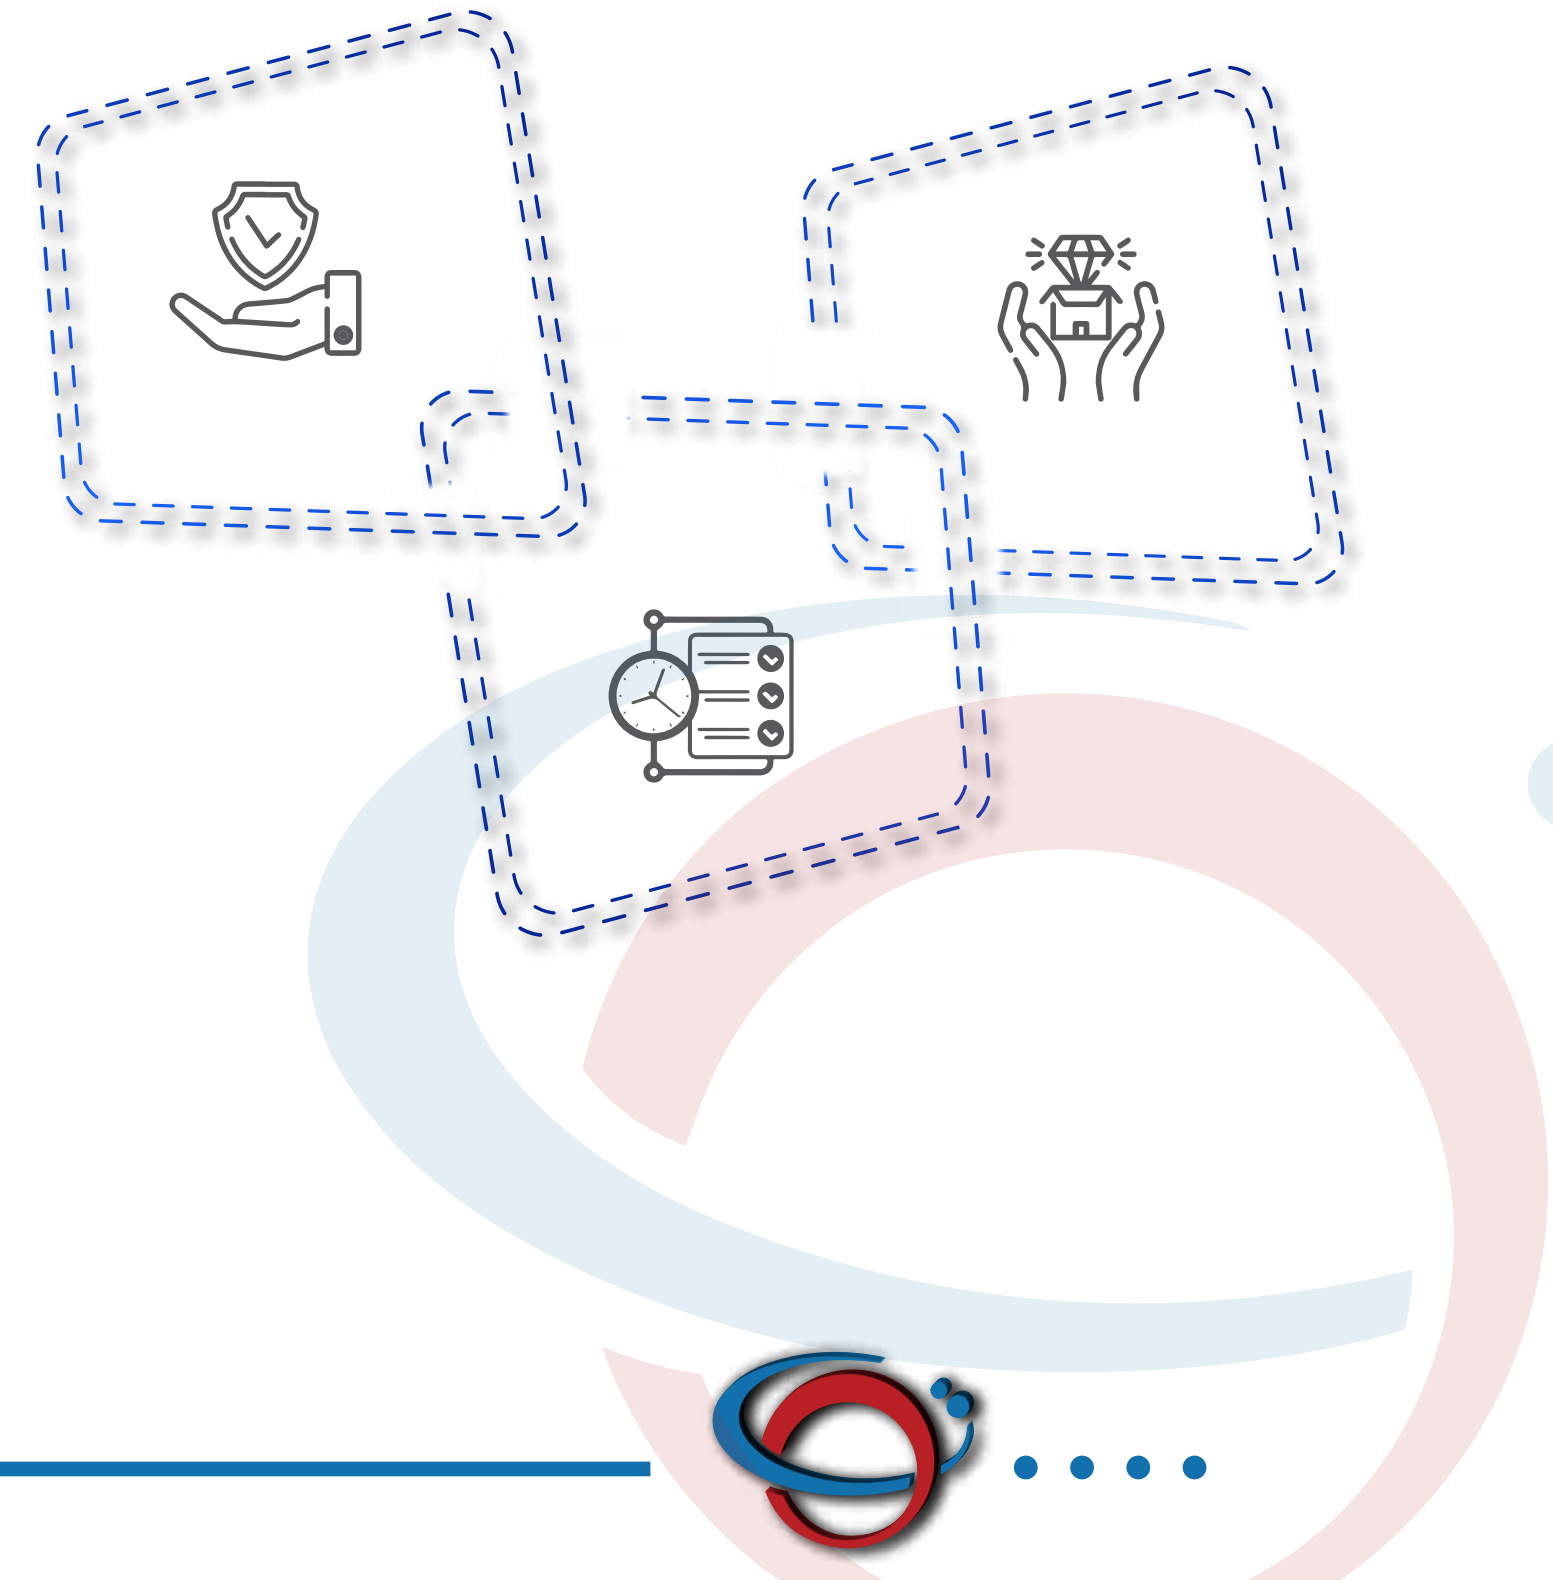

The main reason for choosing to work with us is the professional technical value we bring to the project. We prioritize building a successful and reliable ethical and technical reputation over immediate financial profit. Our main goal is to build a successful and reliable ethical and technical reputation through providing services and completing work within the framework of innovation, credibility and the quality. We always appreciate, respect, and listen to the requests and needs of our clients, aiming to be their helping hand while maintaining quality, assurance, and reliability.

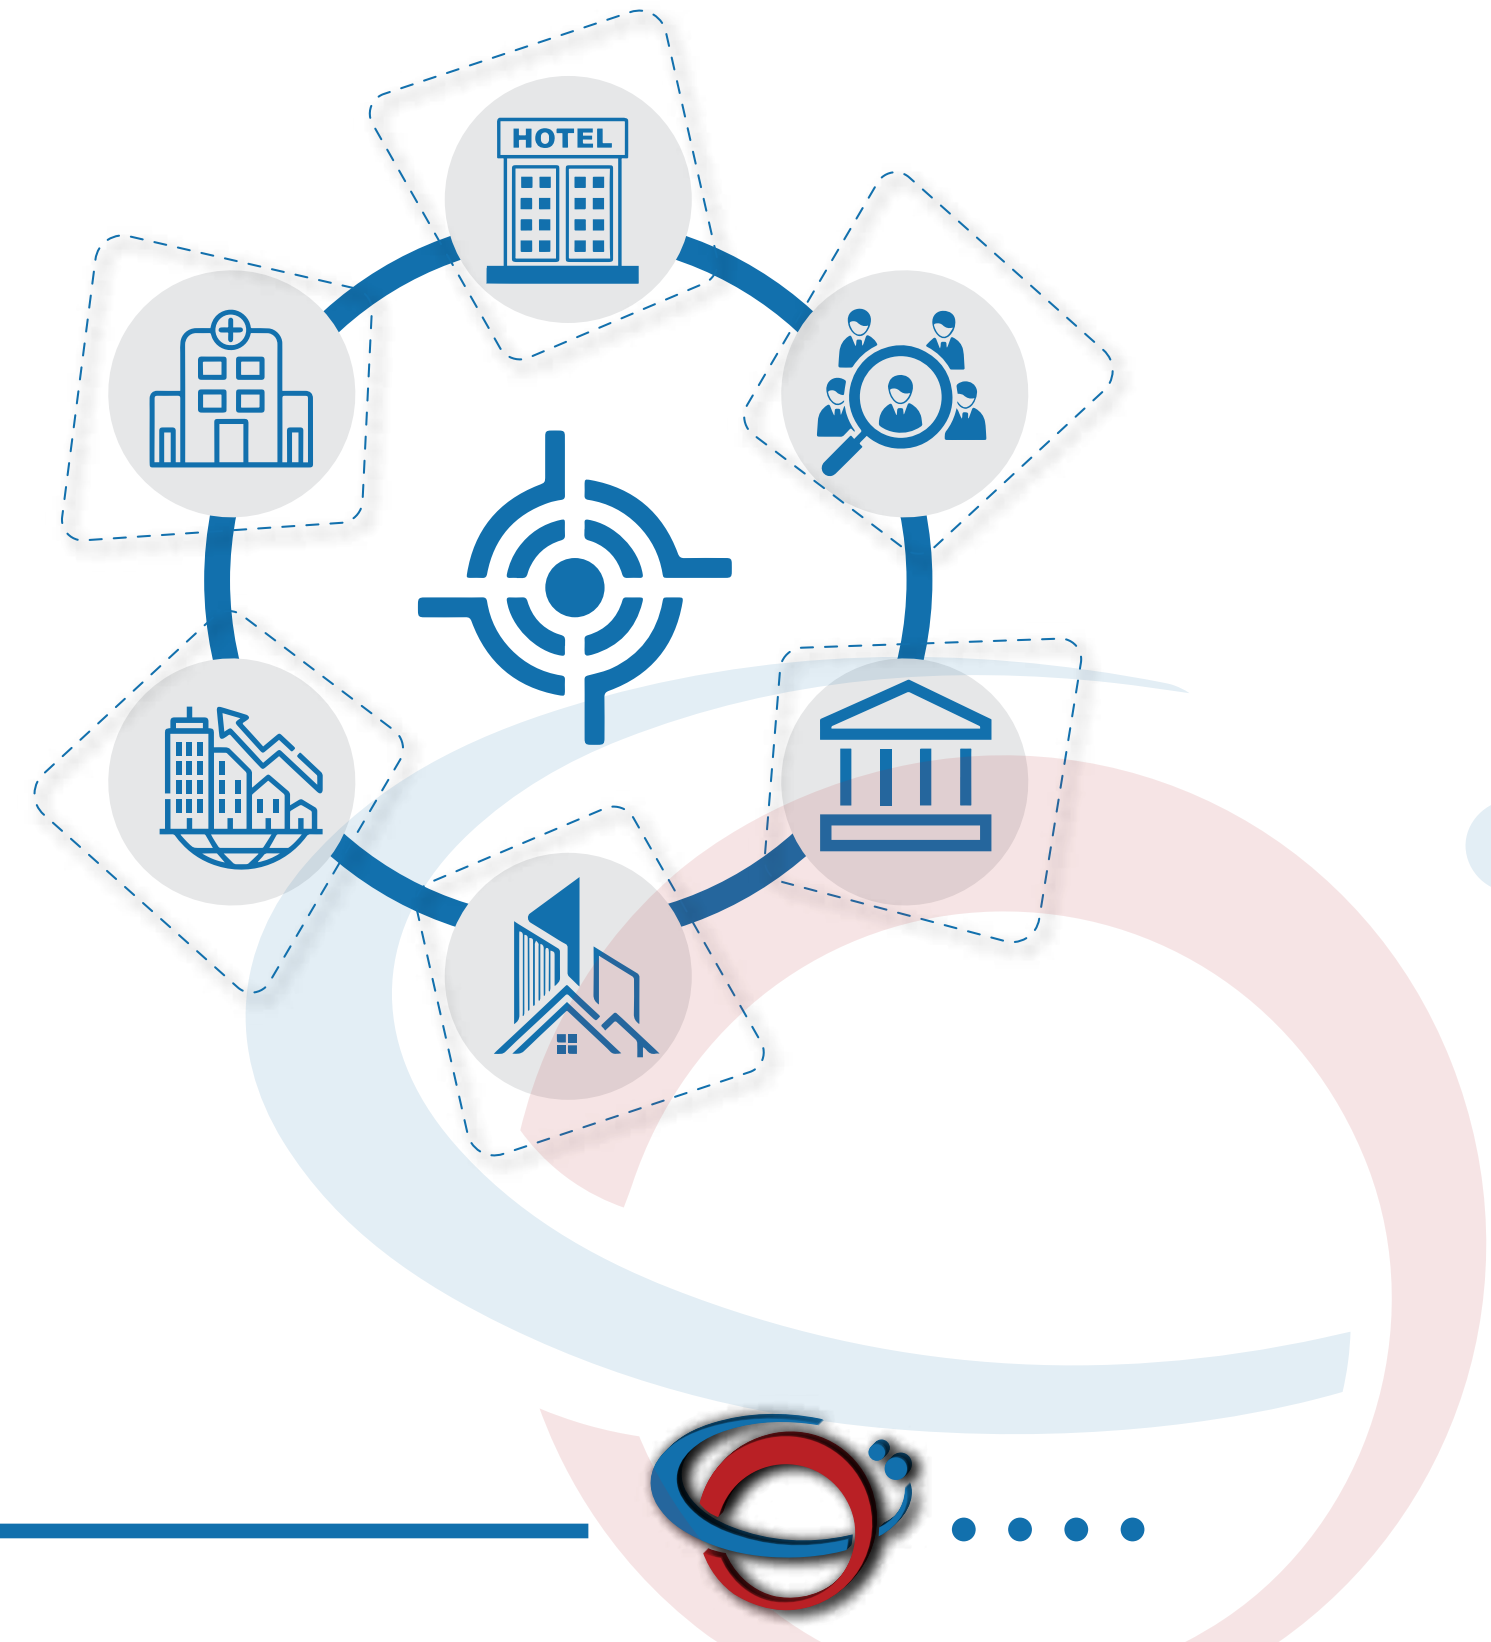

We execute projects and entrusted work with complete technical and ethical professionalism, exceeding customer expectations. We fully commit to schedules for completing and delivering assigned projects on time without delay, within a framework of mutual cooperation and respect, while preserving quality, assurance, and reliability.

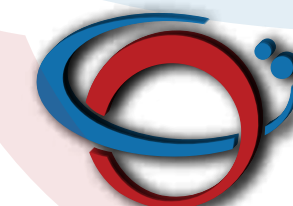

We offer pricing, sales, and supply services for new and under-construction projects, in addition to maintenance and operation services for existing projects requiring technical support, securing necessary spare parts, renewal, and system development according to the project's needs. The main targeted sectors include:

- © Hotel projects
- © Hospitals
- © Contracting companies
- © Palaces and residential compounds

Our clients are our true partners and the real value behind our reputation. Therefore, we always put them as a priority and work in various ways to ensure their complete satisfaction with all the services and work we provide. We also aspire to gain the trust of future clients, just as we have earned the trust of our current clients.
